INDEPENDENT EATING IS POSSIBLE WITH OBI ROBOT

obi 3

The next generation of robotic self-feeding is here!

WHAT IS OBI?

Obi is a revolutionary adaptive eating device for individuals with upper extremity strength and mobility limitations. Through the use of customizable accessibility switches, Obi allows the user to control what they eat and when!

Learn about our newest generation, Obi 3, here:

OPERATION

Obi is controlled by any part of the body that can activate a switch. Obi is compatible with most switches that utilize a 3.5mm headphone jack adapter.

OUR STORY

We are a family-owned-and-operated small business with over a decade of unwavering dedication to our mission of providing everyone access to independence through world-class technology and innovation. Obi is proudly designed and manufactured with the utmost quality and care in our own facility in Jacksonville, Florida.

Obi was inspired by founder Jon Dekar's experience with his grandfather, a U.S. Veteran, who struggled to eat with independence toward the end of his life. With no technology available to solve this problem in a dignified way, Jon, an engineer, set out to create a solution that could help many people worldwide.

From our family to yours!
